

Work Experience Placement – Testimonial: **Eli Tam, Mining Engineer Undergraduate**

Eli Tam was offered a workplace by OZ Minerals after applying for the position via Hot Rubble. He got in touch to let us know 'OzMinerals is a great place to work and because it's a new mine he is learning a lot about how mines are set up.'

Here's how Eli summed up his experience using Hot Rubble:

"Through my first few years of my mining engineering degree I had the constant reminder that I needed to complete engineering work experience in order to graduate. This reminder was made worse knowing that mining related work experience is a struggle to find.

In my final year of uni I was introduced by a friend to Hot Rubble where I found a hub of companies actually in the market for vacation students. After years of only applying to single companies here and there, Hot Rubble represented to me a focusing of all advertised work experience positions and made my search a lot easier. I applied for the positions I was most interested in and was accepted by a great company as an underground mine engineer vacation student.

Thank you Hot Rubble!"
